

## Positive or negative movie review?

- unbelievably disappointing

- Full of zany characters and richly applied satire, and some great plot twists

- this is the greatest screwball comedy ever filmed

- It was pathetic. The worst part about it was the boxing scenes.

## Google Product Search

CountAdam: FANTASTIC customer service from United Airlines at XNA today. Is tweet more,  
Posted 4 hours ago

# Sentiment analysis has many other names

- Opinion extraction
- Opinion mining
- Sentiment mining
- Subjectivity analysis

## Why sentiment analysis?

- *Movie*: is this review positive or negative?
- *Products*: what do people think about the new iPhone?
- *Public sentiment*: how is consumer confidence? Is despair increasing?
- *Politics*: what do people think about this candidate or issue?
- *Prediction*: predict election outcomes or market trends from sentiment

# Scherer Typology of Affective States

- **Emotion:** brief organically synchronized ... evaluation of a major event
  - *angry, sad, joyful, fearful, ashamed, proud, elated*
- **Mood:** diffuse non-caused low-intensity long-duration change in subjective feeling
  - *cheerful, gloomy, irritable, listless, depressed, buoyant*
- **Interpersonal stances:** affective stance toward another person in a specific interaction
  - *friendly, flirtatious, distant, cold, warm, supportive, contemptuous*
- **Attitudes:** enduring, affectively colored beliefs, dispositions towards objects or persons
  - *liking, loving, hating, valuing, desiring*
- **Personality traits:** stable personality dispositions and typical behavior tendencies
  - *nervous, anxious, reckless, morose, hostile, jealous*

# Scherer Typology of Affective States

- **Emotion:** brief organically synchronized ... evaluation of a major event
  - *angry, sad, joyful, fearful, ashamed, proud, elated*
- **Mood:** diffuse non-caused low-intensity long-duration change in subjective feeling
  - *cheerful, gloomy, irritable, listless, depressed, buoyant*
- **Interpersonal stances:** affective stance toward another person in a specific interaction
  - *friendly, flirtatious, distant, cold, warm, supportive, contemptuous*
- **Attitudes:** enduring, affectively colored beliefs, dispositions towards objects or persons
  - *liking, loving, hating, valuing, desiring*
- **Personality traits:** stable personality dispositions and typical behavior tendencies
  - *nervous, anxious, reckless, morose, hostile, jealous*

# Sentiment Analysis

- Sentiment analysis is the detection of **attitudes**  
“enduring, affectively colored beliefs, dispositions towards objects or persons”
  1. **Holder (source)** of attitude
  2. **Target (aspect)** of attitude
  3. **Type** of attitude
    - From a set of types
      - *Like, love, hate, value, desire, etc.*
    - Or (more commonly) simple weighted **polarity**:
      - *positive, negative, neutral, together with strength*
  4. **Text** containing the attitude
    - Sentence or entire document

# Sentiment Analysis

- Simplest task:
  - Is the attitude of this text positive or negative?
- More complex:
  - Rank the attitude of this text from 1 to 5
- Advanced:
  - Detect the target, source, or complex attitude types

# Sentiment Analysis

- Simplest task:
  - Is the attitude of this text positive or negative?
- More complex:
  - Rank the attitude of this text from 1 to 5
- Advanced:
  - Detect the target, source, or complex attitude types

[illegible]

# What is Sentiment Analysis?

# A Baseline Algorithm

Dan Jurafsky

# Sentiment Classification in Movie Reviews

Bo Pang, Lillian Lee, and Shivakumar Vaithyanathan. 2002. Thumbs up? Sentiment Classification using Machine Learning Techniques. EMNLP-2002, 79—86.

Bo Pang and Lillian Lee. 2004. A Sentimental Education: Sentiment Analysis Using Subjectivity Summarization Based on Minimum Cuts. ACL, 271-278

- Polarity detection:
  - Is an IMDB movie review positive or negative?
- Data: *Polarity Data 2.0*:
  - <http://www.cs.cornell.edu/people/pabo/movie-review-data>

## IMDB data in the Pang and Lee database

when \_star wars\_ came out some twenty years ago , the image of traveling throughout the stars has become a commonplace image . [...]

when han solo goes light speed , the stars change to bright lines , going towards the viewer in lines that converge at an invisible point .

cool .

\_october sky\_ offers a much simpler image—that of a single white dot , traveling horizontally across the night sky . [ . . . ]

“ snake eyes ” is the most aggravating kind of movie : the kind that shows so much potential then becomes unbelievably disappointing .

it’s not just because this is a brian depalma film , and since he’s a great director and one who’s films are always greeted with at least some fanfare .

and it’s not even because this was a film starring nicolas cage and since he gives a brauvara performance , this film is hardly worth his talents .

Dan Jurafsky

# Baseline Algorithm (adapted from Pang and Lee)

- Tokenization
- Feature Extraction
- Classification using different classifiers
  - Naïve Bayes
  - MaxEnt
  - SVM

# Sentiment Tokenization Issues

- Deal with HTML and XML markup
- Twitter mark-up (names, hash tags)
- Capitalization (preserve for

words in all caps)

- Phone numbers, dates

- Emoticons

- Useful code:

Potts emoticons

[<>]?	# optional hat/brow
[:=8]	# eyes
[\-o\*\ ' ]?	# optional nose
[\)\]\]\(\[dDpP/\: \}\{\@ \ \ \]	# mouth
	#### reverse orientation
[\)\]\]\(\[dDpP/\: \}\{\@ \ \ \]	# mouth
[\-o\*\ ' ]?	# optional nose
[:=8]	# eyes
[<>]?	# optional hat/brow

- [Christopher Potts sentiment tokenizer](#)
- [Brendan O'Connor twitter tokenizer](#)

# Extracting Features for Sentiment Classification

- How to handle negation
  - I **didn't** like this movie
  - vs
  - I really like this movie
- Which words to use?
  - Only adjectives
  - All words
    - All words turns out to work better, at least on this data

## Negation

Das, Sanjiv and Mike Chen. 2001. Yahoo! for Amazon: Extracting market sentiment from stock message boards. In Proceedings of the Asia Pacific Finance Association Annual Conference (APFA).  
Bo Pang, Lillian Lee, and Shivakumar Vaithyanathan. 2002. Thumbs up? Sentiment Classification using Machine Learning Techniques. EMNLP-2002, 79—86.

Add NOT\_ to every word between negation and following punctuation:

didn't like this movie , but I

didn't NOT\_like NOT\_this NOT\_movie but I

## Reminder: Naïve Bayes

$$c_{NB} = \operatorname{argmax}_{c_j \in C} P(c_j) \prod_{i \in \text{positions}} P(w_i | c_j)$$

$$\hat{P}(w | c) = \frac{\text{count}(w, c) + 1}{\text{count}(c) + |V|}$$

## Binarized (Boolean feature) Multinomial Naïve Bayes

- Intuition:
  - For sentiment (and probably for other text classification domains)
  - Word occurrence may matter more than word frequency
    - The occurrence of the word *fantastic* tells us a lot
    - The fact that it occurs 5 times may not tell us much more.
  - Boolean Multinomial Naïve Bayes
    - Clips all the word counts in each document at 1

# Boolean Multinomial Naïve Bayes: Learning

- From training corpus, extract *Vocabulary*
- Calculate  $P(c_j)$  terms
  - For each  $c_j$  in  $C$  do
    - $docs_j \leftarrow$  all docs with class =  $c_j$
    - $$P(c_j) \leftarrow \frac{|docs_j|}{|\text{total \# documents}|}$$
- Calculate  $P(w_k | c_j)$  terms
  - Remove duplicates in each  $docs_j$
  - For each word type  $w$  in  $docs_j$ 
    - Retain only a single instance of  $w$
  - For each word  $w_k$  in *Vocabulary*
    - $n_k \leftarrow$  # of occurrences of  $w_k$  in  $Text_j$
    - $$P(w_k | c_j) \leftarrow \frac{n_k + \alpha}{n + \alpha |Vocabulary|}$$

## Boolean Multinomial Naïve Bayes on a test document $d$

- First remove all duplicate words from  $d$
- Then compute NB using the same equation:

$$c_{NB} = \operatorname{argmax}_{c_j \in C} P(c_j) \prod_{i \in \text{positions}} P(w_i | c_j)$$

## Normal vs. Boolean Multinomial NB

Normal	Doc	Words	Class
Training	1	Chinese Beijing Chinese	c
	2	Chinese Chinese Shanghai	c
	3	Chinese Macao	c
	4	Tokyo Japan Chinese	j
Test	5	Chinese Chinese Chinese Tokyo Japan	?

Boolean	Doc	Words	Class
Training	1	Chinese Beijing	c
	2	Chinese Shanghai	c
	3	Chinese Macao	c
	4	Tokyo Japan Chinese	j
Test	5	Chinese Tokyo Japan	?

# Binarized (Boolean feature) Multinomial Naïve Bayes

B. Pang, L. Lee, and S. Vaithyanathan. 2002. Thumbs up? Sentiment Classification using Machine Learning Techniques. EMNLP-2002, 79—86.

V. Metsis, I. Androutsopoulos, G. Paliouras. 2006. Spam Filtering with Naive Bayes – Which Naive Bayes? CEAS 2006 - Third Conference on Email and Anti-Spam.

K.-M. Schneider. 2004. On word frequency information and negative evidence in Naive Bayes text classification. ICANLP, 474-485.

JD Rennie, L Shih, J Teevan. 2003. Tackling the poor assumptions of naive bayes text classifiers. ICML 2003

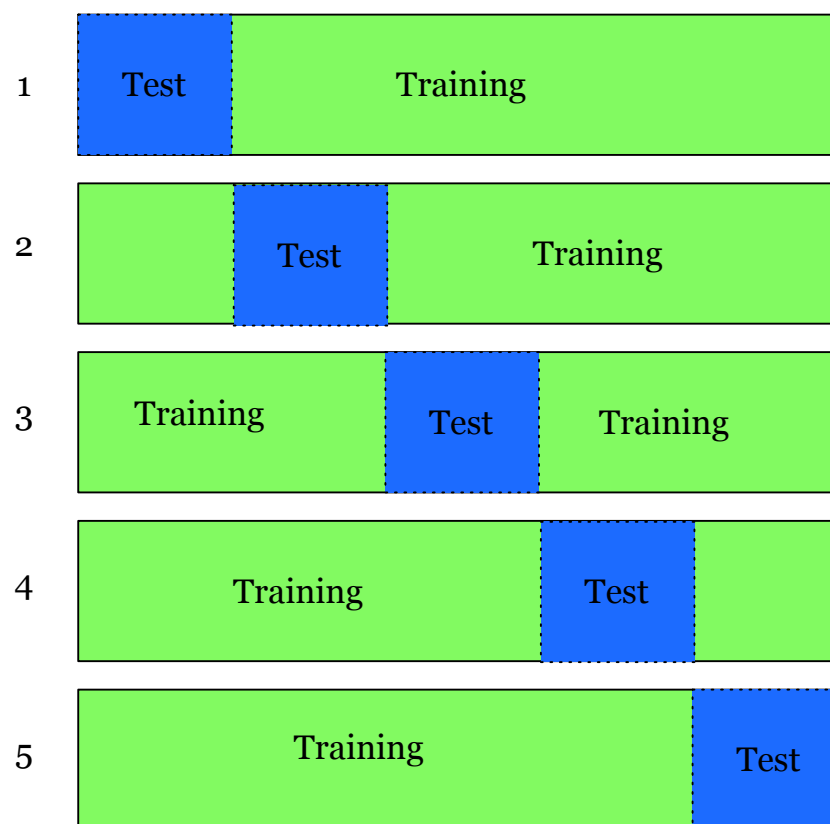

- Binary seems to work better than full word counts
  - This is **not** the same as Multivariate Bernoulli Naïve Bayes
    - MBNB doesn't work well for sentiment or other text tasks
- Other possibility:  $\log(\text{freq}(w))$

# Cross-Validation

- Break up data into 10 folds
  - (Equal positive and negative inside each fold?)
- For each fold
  - Choose the fold as a temporary test set
  - Train on 9 folds, compute performance on the test fold
- Report average performance of the 10 runs

Iteration

## Other issues in Classification

- MaxEnt and SVM tend to do better than Naïve Bayes

# Problems:

## What makes reviews hard to classify?

- Subtlety:
  - Perfume review in *Perfumes: the Guide*:
    - “If you are reading this because it is your darling fragrance, please wear it at home exclusively, and tape the windows shut.”
  - Dorothy Parker on Katherine Hepburn
    - “She runs the gamut of emotions from A to B”

## Thwarted Expectations and Ordering Effects

- “This film should be **brilliant**. It sounds like a **great** plot, the actors are **first grade**, and the supporting cast is **good** as well, and Stallone is attempting to deliver a good performance. However, it **can’t hold up**.”
- Well as usual Keanu Reeves is nothing special, but surprisingly, the **very talented** Laurence Fishbourne is **not so good** either, I was surprised.

LIWC				

# Analyzing the polarity of each word in IMDB

Potts, Christopher. 2011. On the negativity of negation. SALT 20, 636-659.

- How likely is each word to appear in each sentiment class?
- Count("bad") in 1-star, 2-star, 3-star, etc.
- But can't use raw counts:

- Instead, **likelihood**: 
$$P(w | c) = \frac{f(w, c)}{\sum_{w \in c} f(w, c)}$$

- Make them comparable between words

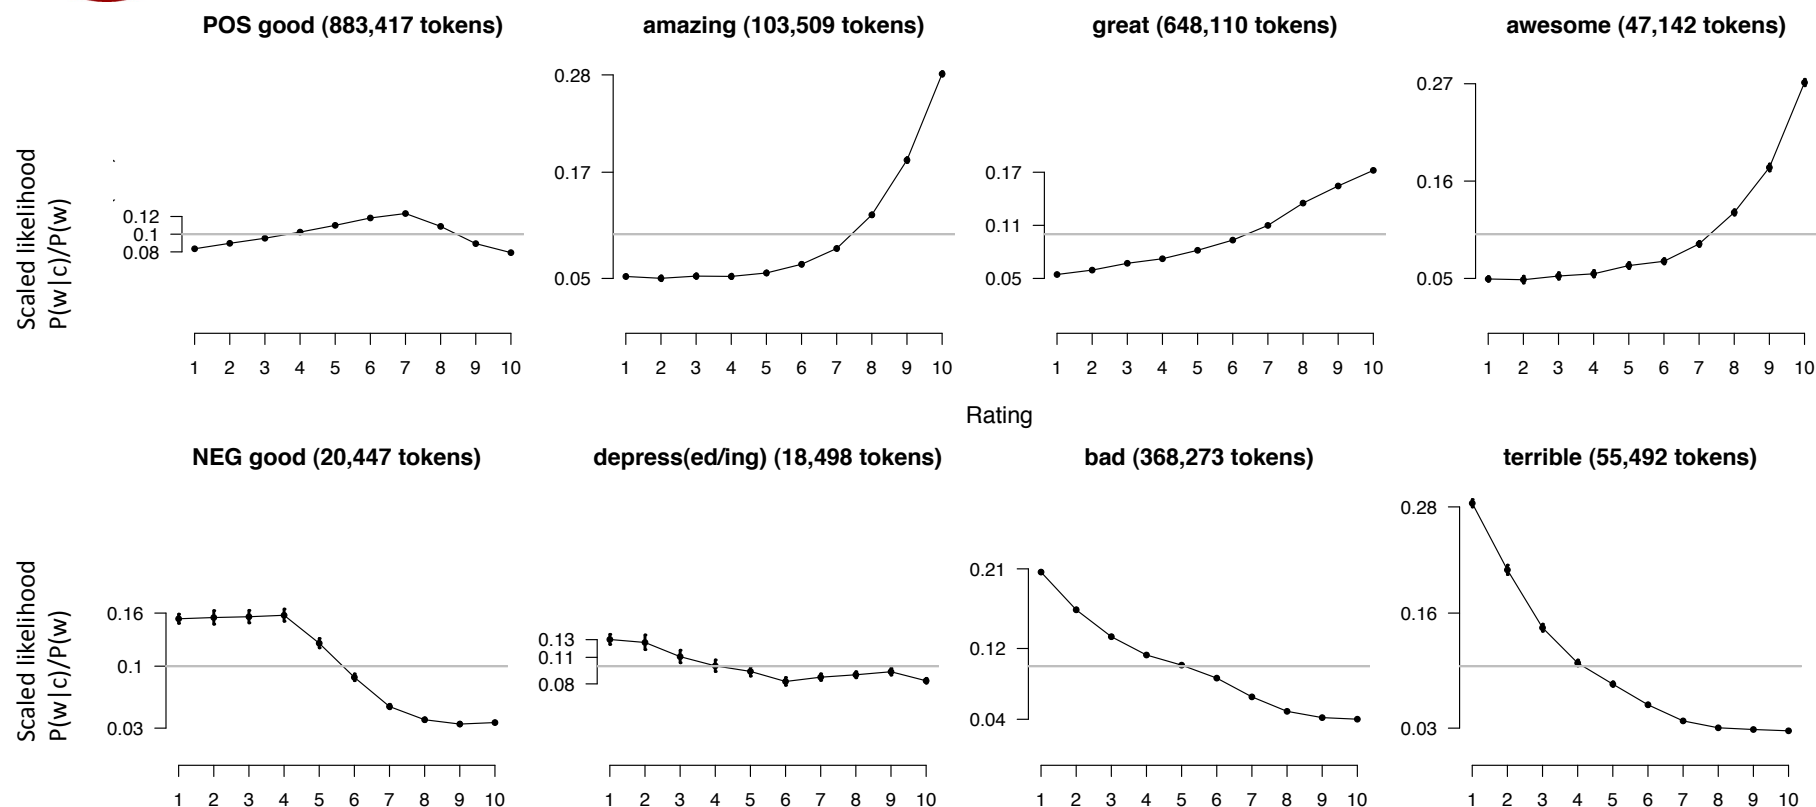

- Scaled likelihood: 
$$\frac{P(w | c)}{P(w)}$$

# Analyzing the polarity of each word in IMDB

Potts, Christopher. 2011. On the negativity of negation. SALT 20, 636-659.

## Other sentiment feature: Logical negation

Potts, Christopher. 2011. On the negativity of negation. *SALT* 20, 636-659.

- Is logical negation (*no*, *not*) associated with negative sentiment?
- Potts experiment:
  - Count negation (*not*, *n't*, *no*, *never*) in online reviews
  - Regress against the review rating

# Potts 2011 Results: More negation in negative sentiment

IMDB (4,073,228 tokens)

Five-star reviews (846,444 tokens)

Scaled likelihood  
 $P(w|c)/P(w)$

[illegible]

[illegible]

# Semi-supervised learning of lexicons

- Use a small amount of information
  - A few labeled examples
  - A few hand-built patterns
- To bootstrap a lexicon

# Hatzivassiloglou and McKeown intuition for identifying word polarity

Vasileios Hatzivassiloglou and Kathleen R. McKeown. 1997. Predicting the Semantic Orientation of Adjectives. ACL, 174–181

- Adjectives conjoined by “*and*” have same polarity
  - Fair **and** legitimate, corrupt **and** brutal
  - \*fair **and** brutal, \*corrupt **and** legitimate
- Adjectives conjoined by “*but*” do not
  - fair **but** brutal

# Hatzivassiloglou & McKeown 1997

## Step 1

- Label **seed set** of 1336 adjectives (all >20 in 21 million word WSJ corpus)
  - 657 positive
    - adequate central clever famous intelligent remarkable  
reputed sensitive slender thriving...
  - 679 negative
    - contagious drunken ignorant lanky listless primitive  
strident troublesome unresolved unsuspecting...

# Hatzivassiloglou & McKeown 1997

## Step 2

- Expand seed set to conjoined adjectives

"was nice and"

[Nice location in Porto and the front desk staff was \*\*nice and helpful\*\*...](#)

[www.tripadvisor.com/ShowUserReviews-g189180-d206904-r12068...](#) +1

4 answers - Sep 21

Question: Your personal opinion or what you think other people's opinions might ...

Top answer: I think she would be cool and confident like katy perry :)

nice, classy

# Hatzivassiloglou & McKeown 1997

## Step 3

- Supervised classifier assigns “polarity similarity” to each word pair, resulting in graph:

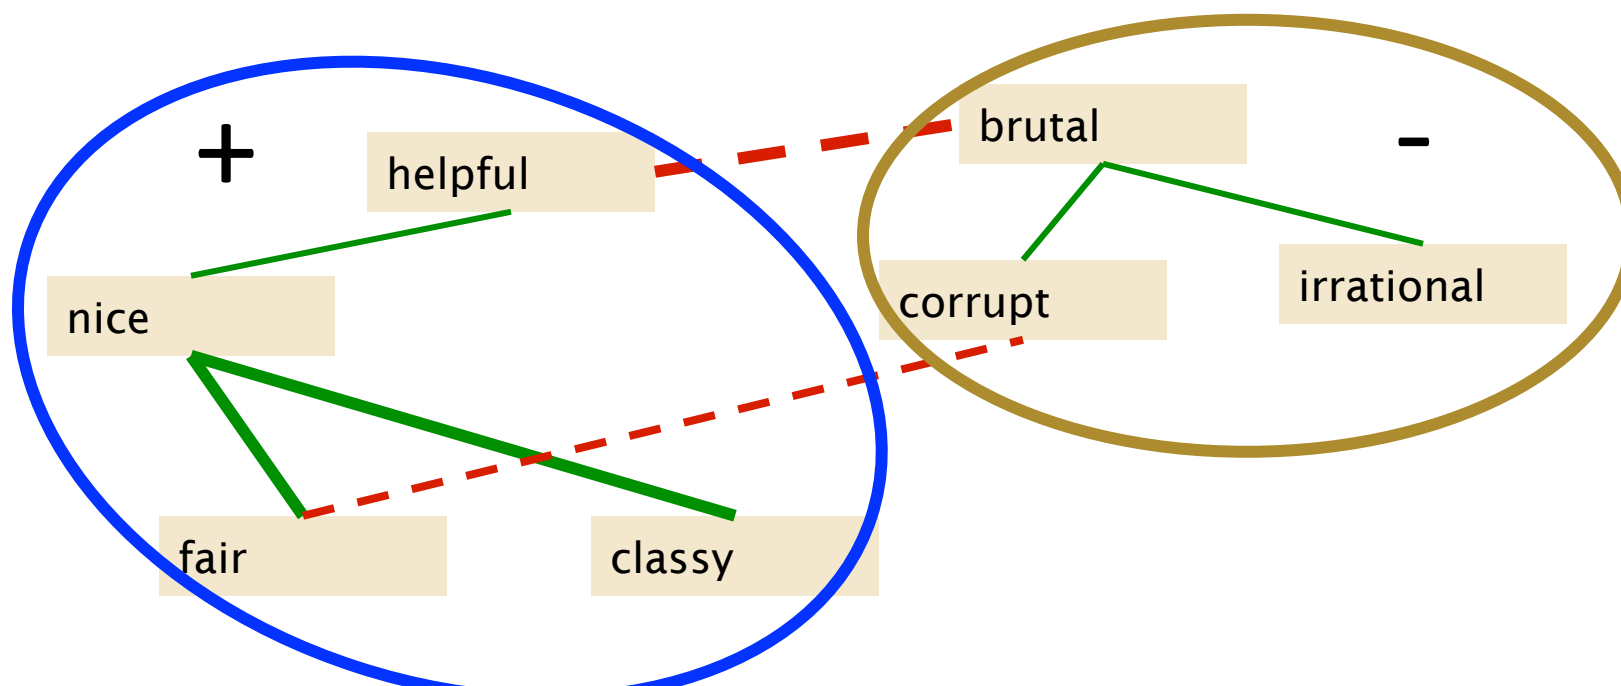

# Hatzivassiloglou & McKeown 1997

## Step 4

- Clustering for partitioning the graph into two

# Output polarity lexicon

- Positive
  - bold decisive disturbing generous good honest important large mature patient peaceful positive proud sound stimulating straightforward strange talented vigorous witty...
- Negative
  - ambiguous cautious cynical evasive harmful hypocritical inefficient insecure irrational irresponsible minor outspoken pleasant reckless risky selfish tedious unsupported vulnerable wasteful...

# Output polarity lexicon

- Positive
  - bold decisive **disturbing** generous good honest important large mature patient peaceful positive proud sound stimulating straightforward **strange** talented vigorous witty...
- Negative
  - ambiguous **cautious** cynical evasive harmful hypocritical inefficient insecure irrational irresponsible minor **outspoken pleasant** reckless risky selfish tedious unsupported vulnerable wasteful...

# Turney Algorithm

Turney (2002): Thumbs Up or Thumbs Down? Semantic Orientation Applied to Unsupervised Classification of Reviews

1. Extract a *phrasal lexicon* from reviews
2. Learn polarity of each phrase
3. Rate a review by the average polarity of its phrases

## Extract two-word phrases with adjectives

First Word	Second Word	Third Word (not extracted)
JJ	NN or NNS	anything
RB, RBR, RBS	JJ	Not NN nor NNS
JJ	JJ	Not NN or NNS
NN or NNS	JJ	Nor NN nor NNS
RB, RBR, or RBS	VB, VBD, VBN, VBG	anything

## How to measure polarity of a phrase?

- Positive phrases co-occur more with “*excellent*”
- Negative phrases co-occur more with “*poor*”
- But how to measure co-occurrence?

## Pointwise Mutual Information

- **Mutual information** between 2 random variables  $X$  and  $Y$

$$I(X, Y) = \sum_x \sum_y P(x, y) \log_2 \frac{P(x, y)}{P(x)P(y)}$$

- **Pointwise mutual information:**
  - How much more do events  $x$  and  $y$  co-occur than if they were independent?

$$\text{PMI}(X, Y) = \log_2 \frac{P(x, y)}{P(x)P(y)}$$

# Pointwise Mutual Information

- **Pointwise mutual information:**

- How much more do events  $x$  and  $y$  co-occur than if they were independent?

$$\text{PMI}(X, Y) = \log_2 \frac{P(x, y)}{P(x)P(y)}$$

- **PMI between two words:**

- How much more do two words co-occur than if they were independent?

$$\text{PMI}(\text{word}_1, \text{word}_2) = \log_2 \frac{P(\text{word}_1, \text{word}_2)}{P(\text{word}_1)P(\text{word}_2)}$$

## How to Estimate Pointwise Mutual Information

- Query search engine (Altavista)
  - $P(\text{word})$  estimated by  $\text{hits}(\text{word}) / N$
  - $P(\text{word}_1, \text{word}_2)$  by  $\text{hits}(\text{word1 NEAR word2}) / N^2$

$$\text{PMI}(\text{word}_1, \text{word}_2) = \log_2 \frac{\text{hits}(\text{word}_1 \text{ NEAR } \text{word}_2)}{\text{hits}(\text{word}_1) \text{hits}(\text{word}_2)}$$

**Does phrase appear more with “poor” or “excellent”?**

$$\text{Polarity}(\textit{phrase}) = \text{PMI}(\textit{phrase}, \text{"excellent"}) - \text{PMI}(\textit{phrase}, \text{"poor"})$$

$$= \log_2 \frac{\text{hits}(\textit{phrase} \text{ NEAR "excellent"})}{\text{hits}(\textit{phrase})\text{hits}(\text{"excellent"})} - \log_2 \frac{\text{hits}(\textit{phrase} \text{ NEAR "poor"})}{\text{hits}(\textit{phrase})\text{hits}(\text{"poor"})}$$

$$= \log_2 \frac{\text{hits}(\textit{phrase} \text{ NEAR "excellent"})}{\text{hits}(\textit{phrase})\text{hits}(\text{"excellent"})} \frac{\text{hits}(\textit{phrase})\text{hits}(\text{"poor"})}{\text{hits}(\textit{phrase} \text{ NEAR "poor"})}$$

$$= \log_2 \left( \frac{\text{hits}(\textit{phrase} \text{ NEAR "excellent"})\text{hits}(\text{"poor"})}{\text{hits}(\textit{phrase} \text{ NEAR "poor"})\text{hits}(\text{"excellent"})} \right)$$

## Phrases from a thumbs-up review

Phrase	POS tags	Polarity
online service	JJ NN	2 . 8
online experience	JJ NN	2 . 3
direct deposit	JJ NN	1 . 3
local branch	JJ NN	0 . 42
...		
low fees	JJ NNS	0 . 33
true service	JJ NN	-0 . 73
other bank	JJ NN	-0 . 85
inconveniently located	JJ NN	-1 . 5
<i>Average</i>		0 . 32

## Phrases from a thumbs-down review

Phrase	POS tags	Polarity
direct deposits	JJ NNS	5 . 8
online web	JJ NN	1 . 9
very handy	RB JJ	1 . 4
...		
virtual monopoly	JJ NN	-2 . 0
lesser evil	RBR JJ	-2 . 3
other problems	JJ NNS	-2 . 8
low funds	JJ NNS	-6 . 8
unethical practices	JJ NNS	-8 . 5
<i>Average</i>		-1 . 2

## Results of Turney algorithm

- 410 reviews from Epinions
  - 170 (41%) negative
  - 240 (59%) positive
- Majority class baseline: 59%
- Turney algorithm: 74%
- Phrases rather than words
- Learns domain-specific information

# Using WordNet to learn polarity

S.M. Kim and E. Hovy. 2004. Determining the sentiment of opinions. COLING 2004

M. Hu and B. Liu. Mining and summarizing customer reviews. In Proceedings of KDD, 2004

- WordNet: online thesaurus (covered in later lecture).
- Create positive (“good”) and negative seed-words (“terrible”)
- Find Synonyms and Antonyms
  - Positive Set: Add synonyms of positive words (“well”) and antonyms of negative words
  - Negative Set: Add synonyms of negative words (“awful”) and antonyms of positive words (“evil”)
- Repeat, following chains of synonyms
- Filter

# Summary on Learning Lexicons

- Advantages:
  - Can be domain-specific
  - Can be more robust (more words)
- Intuition
  - Start with a seed set of words ('good', 'poor')
  - Find other words that have similar polarity:
    - Using "and" and "but"
    - Using words that occur nearby in the same document
    - Using WordNet synonyms and antonyms

[illegible]

# Sentiment Analysis

# Other Sentiment Tasks

## Finding sentiment of a sentence

- Important for finding aspects or attributes
  - Target of sentiment
- The food was great but the service was awful

## Finding aspect/attribute/target of sentiment

M. Hu and B. Liu. 2004. Mining and summarizing customer reviews. In Proceedings of KDD.

S. Blair-Goldensohn, K. Hannan, R. McDonald, T. Neylon, G. Reis, and J. Reynar. 2008. Building a Sentiment Summarizer for Local Service Reviews. WWW Workshop.

- Frequent phrases + rules
  - Find all highly frequent phrases across reviews (“fish tacos”)
  - Filter by rules like “occurs right after sentiment word”
    - “...great fish tacos” means fish tacos a likely aspect

Casino	casino, buffet, pool, resort, beds
Children’s Barber	haircut, job, experience, kids
Greek Restaurant	food, wine, service, appetizer, lamb
Department Store	selection, department, sales, shop, clothing

## Finding aspect/attribute/target of sentiment

- The aspect name may not be in the sentence
- For restaurants/hotels, aspects are well-understood
- Supervised classification
  - Hand-label a small corpus of restaurant review sentences with aspect
    - food, décor, service, value, NONE
  - Train a classifier to assign an aspect to a sentence
    - “Given this sentence, is the aspect *food*, *décor*, *service*, *value*, or *NONE*”

# Putting it all together: Finding sentiment for aspects

S. Blair-Goldensohn, K. Hannan, R. McDonald, T. Neylon, G. Reis, and J. Reynar. 2008. Building a Sentiment Summarizer for Local Service Reviews. WWW Workshop

## Results of Blair-Goldensohn et al. method

Rooms (3/5 stars, 41 comments)

- (+) The room was clean and everything worked fine – even the water pressure ...
- (+) We went because of the free room and was pleasantly pleased ...
- (-) ...the worst hotel I had ever stayed at ...

Service (3/5 stars, 31 comments)

- (+) Upon checking out another couple was checking early due to a problem ...
- (+) Every single hotel staff member treated us great and answered every ...
- (-) The food is cold and the service gives new meaning to SLOW.

Dining (3/5 stars, 18 comments)

- (+) our favorite place to stay in biloxi.the food is great also the service ...
- (+) Offer of free buffet for joining the Play

# Baseline methods assume classes have equal frequencies!

- If not balanced (common in the real world)
  - can't use accuracies as an evaluation
  - need to use F-scores
- Severe imbalancing also can degrade classifier performance
- Two common solutions:
  1. Resampling in training
    - Random undersampling
  2. Cost-sensitive learning
    - Penalize SVM more for misclassification of the rare thing

# How to deal with 7 stars?

Bo Pang and Lillian Lee. 2005. Seeing stars: Exploiting class relationships for sentiment categorization with respect to rating scales. ACL, 115-124

1. Map to binary
2. Use linear or ordinal regression
  - Or specialized models like metric labeling

## Summary on Sentiment

- Generally modeled as classification or regression task
  - predict a binary or ordinal label
- Features:
  - Negation is important
  - Using all words (in naïve bayes) works well for some tasks
  - Finding subsets of words may help in other tasks
    - Hand-built polarity lexicons
    - Use seeds and semi-supervised learning to induce lexicons

# Scherer Typology of Affective States

- **Emotion:** brief organically synchronized ... evaluation of a major event
  - *angry, sad, joyful, fearful, ashamed, proud, elated*
- **Mood:** diffuse non-caused low-intensity long-duration change in subjective feeling
  - *cheerful, gloomy, irritable, listless, depressed, buoyant*
- **Interpersonal stances:** affective stance toward another person in a specific interaction
  - *friendly, flirtatious, distant, cold, warm, supportive, contemptuous*
- **Attitudes:** enduring, affectively colored beliefs, dispositions towards objects or persons
  - *liking, loving, hating, valuing, desiring*
- **Personality traits:** stable personality dispositions and typical behavior tendencies
  - *nervous, anxious, reckless, morose, hostile, jealous*

# Computational work on other affective states

- **Emotion:**
  - Detecting annoyed callers to dialogue system
  - Detecting confused/frustrated versus confident students
- **Mood:**
  - Finding traumatized or depressed writers
- **Interpersonal stances:**
  - Detection of flirtation or friendliness in conversations
- **Personality traits:**
  - Detection of extroverts

# Detection of Friendliness

Ranganath, Jurafsky, McFarland

- Friendly speakers use collaborative conversational style
  - Laughter
  - Less use of negative emotional words
  - More sympathy
    - That's too bad      I'm sorry to hear that
  - More agreement
    - I think so too
  - Less hedges
    - kind of      sort of      a little ...

# Other Sentiment Tasks
